

To get a good fitting Sun Dome screen cover we need to know the following:

1. diameter of a round pool or length & width of an oval pool
2. amount of uprights in the pool
3. measure the width of the top rail
4. measure the length of the top rail from the middle of one cap to the middle of the next top cap on the outside of the top rail (on oval pools we need this measurement on one of the curved ends and one of the straight sides (see illustration below))
